December 12, 2023

RoHS Position Statement, EU Directive 2011/65/EU

1) RoHS Status of Control Products Corporation's Products

Control Products Corporation ("CPC") manufactures products that are considered outside the scope of RoHS or are otherwise exempt (military equipment, equipment intended to be used as part of transportation (Commercial Aircraft) equipment, certain parts of monitoring and control equipment). Specifically, CPC's military and transportation parts (the vast majority of CPC's products) are considered outside the scope of RoHS, as defined by Directive 2011/65/EU, Article 2 (Scope), Item 4.

2) Lead-Free Risk Mitigation

Control Products Corporation, as a matter of course, advocates the use of environmentally friendly design principles. However, CPC has not implemented, and does not intend to convert to completely lead-free technology in the near future because of reliability concerns related to lead-free electronic parts (e.g. tin whiskers, mixed-solder incompatibility etc). CPC's Lead-Free Plan is in place to mitigate the risks of lead-free technology, and is reviewed annually (at a minimum) to keep pace with technology changes.

3) RoHS Position Statement for Aircraft Lighting Components

Control Products Corporation's products do not contain any of the substances restricted by RoHS (lead, cadmium, mercury, hexavalent chromium, polybrominated biphenyl (PBB), and polybrominated diphenyl ether (PBDE) flame retardants).
